Spray on a microfiber towel, then apply onto the surface and wipe off the edges, cca. 1-2 cm from the sides with alcohol cleaner sprayed onto another cloth. Wait till it dries, then begin the installation. The De-Tack Solution will evaporate from beneath the film in about 1-2 weeks time, ensuring the maximum grip on flat surfaces as well. During installation you should not notice any squeegee and lift lines. If tack is still too strong, you can apply more layers of the De-Tack Solution.
